

Midway's Chronological Pictorial example of the Step By Step Site Development Process
1-866-464-1155 RBI34418

It is very rare the have one situation where we have to contend with virtually every step as well as heavy rains as we did with this project. These pictures say 1000's of words.

First, a site plan was drawn up. Failure to plan can be a plan for frustration.

Removal of the awning & skirting of the trade in

Pulling the old home out.

Getting rid of old concrete.

Pouring new concrete runners for new home. As these home owners had designed to have either a driveway, patio, garage, parking area, or sidewalk around and next to the entire home; they selected a foundation of runners to support their home and have the concrete around their home extend back under for their skirting. This saved money.

Installation of a new septic system

Running sewer line for R.V. hook-up.

Water line installation.

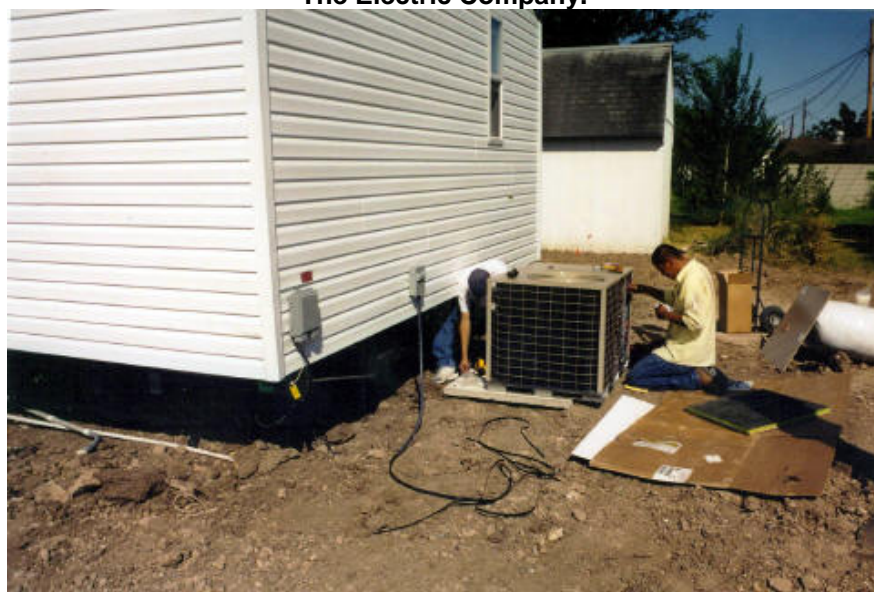

New home arrives to lot and owner's possessions are switched from old home to new home.

New home is moved on owner's lot.

The Electric Company.

The Air conditioning is installed.

Rain can halt the set-up process.

Gas meter and line are abandoned.

The concrete is brought in for the sidewalk.

The garage is started.

The Garage is ready to store things and concrete is on the way.

The other side of the garage.

The rest of the concrete is put in.

Midway Homes does not have the ability to take the roll of General Contractor in many areas of the State. We can assist you with a plan and share our ideas and experience with you which can help you make your home more desirable.

WE AIM TO PLEASE!
